

Proposal 1: AI-licious (Automated Business Solution for F&B)

Category: AI

Subcategory: AI-licious (Automated Business Solution)

Introduction

What is AI-licious? AI-licious is an innovative AI-powered platform that provides automated and customizable business solutions for the Food and Beverage (F&B) industry. Our slogan is: "AI-licious: Quick Serving, Better Connection."

Our main focus is enhancing customer service using AI tools such as AI chatbots and robotic carriers, specifically tailored for F&B environments. We offer a customizable business model that supports the entire F&B operation, which includes order sorting systems, seat and crowd management, and the production and delivery of orders. In addition, we provide AI-driven marketing tools with features such as scheduled posting. These tools use AI algorithms to create optimized marketing strategies that help F&B businesses reach their target audiences on social media platforms.

To introduce our technology and services to potential clients, we propose organizing an exhibition in Kuala Lumpur, one of Malaysia's leading technology hubs. The exhibition will include product demonstrations, pre-AI transformation pitching, games, lucky draws, and other engaging activities.

Venue: Kuala Lumpur Convention Centre (KLCC)

Date: 15 December 2024 to 18 December 2024

Time: 10:00 AM to 9:30 PM

Problem

The F&B industry is facing growing demands for faster service and higher levels of customization. Self-service ordering kiosks are becoming increasingly common in order to save time and reduce manpower. However, current kiosks have limitations when it comes to customization. For example, bubble tea shops often require detailed customization options such as sugar levels, ice levels, and toppings. Based on a survey conducted with 1,000 customers across seven major bubble tea shops in Malaysia, 20 percent reported receiving incorrect orders, 80 percent expressed a preference for customizable options, and 90 percent hoped to shorten their waiting times without compromising on the customization of their orders.

Solution

AI-licious provides a fully automated and intelligent business solution that ensures efficient and accurate operation across the entire F&B production line—from ordering platforms to delivery. Our advanced AI technology reduces waiting times while maintaining a high degree of customization. This leads to improved customer satisfaction with both the products they receive and the service they experience.

Justification

We are requesting RM50,000 to organize the exhibition at KLCC. The funds will be allocated to various needs including exhibition space rental, logistics, promotional materials, and prizes for games and lucky draws. Some key benefits for sponsors include:

1. **Effective brand exposure:** The logos of sponsoring companies will be printed on all event promotional materials such as banners, buntings, and leaflets.
2. **Networking opportunities:** Sponsors will connect with various F&B companies in Malaysia, opening doors for future collaboration.
3. **Exclusive offers:** Sponsors will receive discounts of up to 90 percent on AI-licious solution services, customized specifically for their operational needs.

Conclusion

With the strategic sponsorship from AMSJI 000 and support from our partners, we believe this exhibition will offer new insights and ideas for modern F&B business operations. By leveraging AI technologies, our solutions are designed to enhance customer satisfaction, improve operational efficiency, and reduce the need for manual labour in the F&B industry.
