Woo Cheng Shuan

Revision Page

a. Overview

System Documentation serves as a document that describes all aspects of a system's operations, including system analysis, designing, development, implementation and testing. It serves as a centralized repository for information about the Koperasi KADA Online System including the system's requirements, design and testing processes. System Documentation provides a holistic view of these three primary components which are the SRS, SDD and STD. SRS outlines the functional and non-functional requirements of our system. SDD provides information about the system's architecture including the designs, structure and data flow. STD describes the testing methodology. This document ensures clarity and quality as well as creating better communication between all stakeholders, developers and operators throughout the development lifecycle.

b. Target Audience

The system documentation is designed for the project stakeholders such as the board of directors and admin users, who need to understand the system's functionalities and impact on operations. It is also intended for system developers and the quality assurance team to guide implementation and testing.

c. Project Team Members

Member Name	Role	Task	Status
Cheryl Cheong Kah Voon	Project manager	• Create user story for new user and member • Draw sequence diagram • Draw activity diagram	Complete
Lau Yee Wen	System analyst	• Document proposal phase • Create user story for admin and board director • Draw sequence diagram • Draw activity diagram	Complete
Chau Ying Jia	System designer	• Design and plan the task • Go through the SD and get the important notes • Write the project overview and scope	Complete
Neo Li Xin	System developer	• Draw state diagram • Draw class diagram • Draw use case diagram	Complete
Woo Cheng Shuan	System testing	• List non-functional performance and other requirement • Write design constraints	Complete

d. **Version Control History**

Version	Primary Author(s)	Description of Version	Date Completed
1.0	Cheryl Cheong Kah Voon Lau Yee Wen Chau Ying Jia Woo Cheng Shuan Neo Li Xin	Partially completed all sections in the system documentation	30/11/2024
2.0	Cheryl Cheong Kah Voon Lau Yee Wen Chau Ying Jia Woo Cheng Shuan Neo Li Xin	• Complete session user story • Complete pesona • Update the use case and domain model	1/12/2024
3.0	Cheryl Cheong Kah Voon Lau Yee Wen Chau Ying Jia Woo Cheng Shuan Neo Li Xin	• Updating team member roles • Reviewing user diagram • Updating ERD diagram, class model diagram, state diagram, activity diagram and sequence diagram • Reviewing document consistent phrasing and providing clearer system clarifications	28/12/2024
4.0	Cheryl Cheong Kah Voon Lau Yee Wen Chau Ying Jia Woo Cheng Shuan Neo Li Xin	• Reviewing user diagram • Updating ERD diagram, class model diagram, state diagram, activity diagram and sequence diagram • Updating the test case	15/1/2025
5.0	Cheryl Cheong Kah Voon Lau Yee Wen Chau Ying Jia Woo Cheng Shuan Neo Li Xin	• Update Use Case • Updating ERD diagram, class model diagram, state diagram, activity diagram and sequence diagram • Updating the test case	12/2/2025

Note:

This System Documentation (SD) template is adapted from IEEE Recommended Practice for Software Requirements Specification (SRS) (IEEE Std. 830-1998), Software Design Descriptions (SDD) (IEEE Std. 1016-1998 1), and Software Test Documentation (IEEE Std. 829-2008) that are simplified and customized to meet the need of SECJ2203 course at Faculty of Computing, UTM. Examples of models are from Arlow and Neustadt (2002) and other sources stated accordingly

Appendix A: Traceability Matrix	89

1. Introduction

The System Design Documentation (SDD) provides a detailed description of the system's architecture, components, and design solutions. It serves as a bridge between the requirements outlined in the System Requirements Specification (SRS) and the actual implementation of the system. This document outlines how the system will be structured, how its components will interact, and the technologies that will be used to ensure the system meets its intended purpose.

1.1 Purpose

The purpose of the System design documentation (SDD) is to provide a detailed architectural framework and design specifications for the Koperasi KADA System. It serves as a blueprint for developers which outlines the system's structural components, functional workflows and technical design elements required for implementation. The SDD bridges the gap between system requirements and implementation by translating the functional and nonfunctional requirements into a concrete design. It ensures clarity in design decisions, facilitates efficient development and supports alignment with project objectives. Moreover, the SDD aids stakeholders including administrators in understanding the system's design and how it addresses operational and technical needs.

1.2 Scope

The Koperasi KADA System is a web-based platform specifically designed to automate and optimize Koperasi KADA's key processes, focusing on member registration, loan applications and related administrative tasks. The system provides distinct functionalities for administrators and members, including member profile management, streamlines loan processing and comprehensive data reporting. The system enhances efficiency, accuracy and accessibility by reducing reliance on manual operations. It offers a unified solution to manage cooperative activities and decision-making effectively.

1. Member Registration

The employee can register for a membership by submitting the member application online to reduce the burden of manual data handling and processing.

2. Loan Application

The loan application can also be submitted online through the system.

3. Application status checking

This feature allows applicants to check the real-time status of their applications through the website. Once the application is approved, they will receive an automated email or SMS notification. The applications included membership applications and loan applications.

4. Check monthly and annual report

The system will generate monthly and annual reports for the Koperasi KADA Online System admin from the database, allowing the Koperasi KADA Online System admin to monitor their financial performance periodically. The system will also generate an annual report for the board directors to offer a comprehensive overview.

1.3 Definitions, Acronyms and Abbreviations

This section provides the definition of fall terms, acronyms and abbreviations used in this System Documentation.

1.	KADA	Lembaga Kemajuan Pertanian Kemubu
2.	SD	System Documentation
3.	SRS	System Requirements Specification
4.	SDD	System Design Document
5.	STD	System Test Document
6.	CCTV	Closed-circuit Television
7.	ISO	International Organization for Standardization
8.	TLS	Transport Layer Security
9.	SSL	Secure Socket Layer
10.	CPU	Central Process Unit
11.	RAM	Random Access Memory

1.5 Overview

In this System Documentation, we will need testers to test that the system satisfies our design or technical requirements. We first introduce the five personas we are going to have throughout this section to let our development team have a clear understanding of the needs of users and to whom the system is designed to ensure that the system is well-developed. Next, we are going to explain our system features using a use case diagram, description, class diagram and state diagram. We are using sequence diagrams to help us to have a clearer view in this section. Lastly, we will finalize our research and make a conclusion on the aspect of system performances, requirements and design constraints.

2. Specific Requirements

In this section, we will identify the user characteristics, system features, use case details, system other requirements and system design constraints. These documents allow stakeholders, developers and operators to better understand the Koperasi KADA Online System main goal as well as the system's overall architecture.

2.1 Persona

The Koperasi KADA Online System software will be used by three main types of users: employees, members and admins. In this section, we will be using a persona to identify the characteristics of the users when meeting certain scenarios. These observations will allow us to make a better judgement about the system's functionality and design. Below are the personas we identified.

2.1.1 Persona 1 (User type 1/Actor 1)

User Need

A secretary managing membership applications.

User Stories

Sarah has been the secretary at KADA for over five years. Her main responsibility includes managing membership applications. Every week, she receives a stack of paper forms from potential members. Some are handwritten and barely legible, others are missing information, and a few arrive late or are misplaced altogether.

She spends hours manually sorting, verifying, and cross-checking details with incomplete spreadsheets. On a hectic day, Sarah needs to catch up on time, stuck between phone calls from applicants asking for updates and trying to find missing files in a growing pile on her desk. By the end of the day, her frustration peaks when she realises she accidentally approved a duplicate application and missed a deadline for another.

Sarah dreams of having a digital system where applicants can easily submit forms, validate their information, and track their application status. This would save her time, reduce errors, and allow her to focus on more strategic tasks. She wishes for a solution that's simple, efficient, and user-friendly—not just for her, but for the applicants as well.

2.1.2 Persona 2 (User type 2/Actor 2)

User Need

An archive staff ensures forms are stored securely and easily accessible.

User Stories

As a staff of KADA, Jonathan is tasked with managing and storing the physical forms in the organisation's archive. He has to make sure that the forms are stored in their respective places so that they are easily accessible by other staff.

One day Jonathan notices that part of the forms are missing. He tried asking other staff about the missing forms but to no avail, no one knew where they were. Confused and panicked, he checked the CCTV footage and confirmed that one of the staff did indeed steal the forms. Disappointed by the incident Jonathan reported it to the organization's management.

After acknowledging the potential security risks, Jonathan proposed to install a digital system where the forms can only be accessed online by authorized users. This system offers better management and security to the customer's information by introducing secure login features, thus reducing the risk of unauthorized users breaching their privacy.

2.1.3 Persona 3 (User type 3/Actor 3)

User Need

A customer service staff receiving necessary financial documents.

User Stories

Judie works in the customer service department. Every day at the counter she handles the physical forms submitted by the customers. Afterwards, the customers are required to submit their bank statements themselves as part of the loan application process. These bank statements are then sent to the management department for further validation.

As time went on, Judie noticed that some customers failed to bring the necessary documents to the next appointed date. This issue causes a delay in the validation process due to incomplete information provided. It also leads to customer dissatisfaction as their mistakes cost them a lot of time.

2.1.4 Persona 4 (User type 4/Actor 4)

User Need

An archive staff manager struggles to find space for paper storage.

User Stories

Kumar has worked as an archive staff manager for the past decade. He has been managing the physical reports and constantly checks on their organization, accuracy, and accessibility to ensure all documents are properly maintained and readily available when needed.

Back then, physical forms were much easier to handle with the help of other staff members. However, recently Kumar noticed that the increasing amount of paperloads each year are getting harder to manage. As applications increase, archive storage decreases as well as increasing workload for the staff members, causing fatigue and stress.

To address this issue, Kumar suggested implementing an online system for storing archives which would reduce manual labor, paper storage, and physical archiving while increasing productivity. This method also offers improved scalability in the future as the number of applications increases

2.1.5 Persona 5 (User type 5/Actor 5)

User Need

The board of directors manages the report.

User Stories

Ali is the board of directors of KADA Corporation Sdn Bhd. He is responsible for managing all types of reports, including member applications, loan applications and transaction records. The managing process involves viewing, checking, validating and printing. This time-consuming approach prompts Ali to seek a centralized and efficient solution for handling all reports.

One afternoon, during a particularly hectic day, Ali receives an urgent call from the CEO demanding a full account of loan approval. As he attempts to complete the report, he sees how much time is spent searching for papers, manually checking data, and ensuring everything is accurate. Frustrated, he thinks of a way to solve this issue.

A few days later, Ali thought of creating a dashboard that could access different types of reports in real-time. The system should display the reports, export them (PDF, Excel) and print a physical copy. Not to mention a feature that can automatically validate the reports to reduce human errors and also save time.

2.2 System Features

The objective of this Koperasi KADA Online System project is to design a system encompassing four key processes: member registration, loan application, reporting, and savings management. The system provides a means for users to do their membership and loan applications can be done online. It replaces the current manual processes, which are time-consuming, prone to errors, and heavily reliant on human resources. The system also ensures better management and security systems to optimise operations while ensuring data integrity and protection.

The system features are illustrated in Figure 2.2.1 below. The detailed description of each module and function is tabulated in Table 2.2.1.

Figure 2.2.1: Use Case Diagram for Koperasi KADA Online System

Table 2.2.1: Description of Module and Functions for Koperasi KADA Online System

Module	Function	Description
Employee Module	Apply membership	This use case describes Koperasi KADA employees applying for membership of Koperasi KADA.
Employee Module	View membership application status	This use case describes Koperasi KADA employees viewing their current membership application status, which is categorized into Approved, In Progress and Failed.
Member Module	View financial status	This use case describes Koperasi KADA members checking their financial account, recent transactions and loan earnings.
Member Module	Apply for loan	This use case allows Koperasi KADA members to register for the loan application.
Member Module	View loan application status	This use case describes Koperasi KADA members viewing their current loan application status, which is categorized into Approved, In Progress and Failed.
Member Module	Manage profile	This use case describes Koperasi KADA members managing their profile, including creating, updating and deleting their personal information.
Admin Module	Approve membership application	This use case describes Koperasi KADA board director and KADA Koperasi Online System admins to approve the membership application from the KADA Koperasi employees.
Admin Module	Approve loan application	This use case describes Koperasi KADA board director and KADA Koperasi Online System admins to approve the loan application from the KADA Koperasi members.
Admin Module	Generate reports	This use case describes Koperasi KADA board director and KADA Koperasi Online System admins to create reports of the successful member and loan applications from the Koperasi KADA employees and KADA Koperasi members respectively.

Figure 2.2.3: State Diagram for Member Application Koperasi KADA Online System

Figure 2.2.3: State Diagram for Loan Application Koperasi KADA Online System

2.3 Launch Phase

The project's components and modules are listed in the product backlog according to priority. Table 1.2 shows the product backlog for the Kada System.

Sprint	Use Case Involved	Team Members Assigned
<i>Sprint #1</i> <i>User Module</i>	UC001 Register Member UC002 View Membership Application Status	Lau Yee Wen
<i>Sprint #2</i> <i>Member Module</i>	UC003 View financial status UC004 Apply for a loan UC005 View Loan Application Status UC006 Manage Profile UC007 Terminate Membership Application	Cheryl Cheong Kah Voon Neo Li Xin
<i>Sprint #3</i> <i>Admin Module</i>	UC008 Approve Membership Application UC009 Approve Loan Application UC0010 Approve Terminate Membership Application UC0011 Generate Reports	Chau Ying Jia Woo Cheng Shuan

2.4 Use Case Details

2.4.1 UC001: Use Case < Apply Membership >

Table 2.4.1.1: User Story Description for Apply Membership

User story: Apply Membership
ID: US001
User Story Description: As a Koperasi KADA employee I want to register as a member of the cooperative So that I can enjoy more benefits that are provided by the cooperative.
Flow of events: 1. The employee accesses the system by searching the website. 2. The employee chooses the “Permohonan Anggota ” on the navigation bar. 3. The employee fills in all the personal details. 4. The employee clicks the submit button to submit the application form. 5. The system will prompt a message to confirm the submission.
Alternative flow: 1. If the personal information is incomplete, the system will prompt a message to remind the employee to fill in the incomplete place. 2. If the application is rejected, the employee must reapply and cannot log in to the system.
Acceptance Criteria Precondition: 1. The employee must be a current employee of the Koperasi KADA. Postcondition: 1. If the application is approved, the member will receive a notification and the employee can log into the system to enjoy the benefits provided by the cooperative. 2. If the application is rejected, the employee will receive a notification. The employee must reapply and cannot log in to the system.

Other conditions:

1. The new member details will be stored in the member database.
2. A rejected application must clearly notify the reason for the rejection so that the employee can easily reapply.

Exception flow:

1. If the system is down, the system will prompt a message to advise the employee to try later.
2. If the employee has invalid details, the system will prompt a message to remind the employee to re-enter.

Figure 2.4.1.2: Sequence Diagram for Apply Membership

Figure 2.4.1.3: Activity Diagram for Apply Membership

2.4.2 UC002: Use Case < View Membership Application Status >

Table 2.4.2.1: User Story Description for View Membership Application Status

User story: View Membership Application Status
ID: US002
User Story Description: As a Koperasi KADA employee I want to view my current membership application status So that I can keep track of my latest membership application status.
Flow of events: 1. The employee accesses the system by searching the website. 2. The employee selects “Perkhidmatan” on the top panel, then selects “Permohonan Anggota” and lastly selects “Status Permohonan Anggota”. 3. The system dashboard will display the current status, ranging from step 1 to 4: • Step 1: Form submitted • Step 2: Application is currently under process • Step 3: Application succeed/fail • Step 4: Application result notification.
Alternative flow: -
Acceptance Criteria Precondition: 1. The employee must already submit the membership application. Postcondition: 1. If the application is approved, the member will receive a notification and the employee can log into the system. 2. If the application is rejected, the employee will receive a notification. The employee must reapply and cannot log in to the system. Other conditions: 1. The new member details will be stored in the member database. 2. A rejected application must clearly notify the reason for the rejection so that the employee can easily reapply.

Exception flow:

1. If the system is down, the system will prompt a message to advise the employee to try later.
2. If the employee has invalid details, the system will prompt a message to remind the employee to re-enter.

Figure 2.4.2.2: Sequence Diagram for View Membership Application Status

Figure 2.4.2.3: Activity Diagram for View Membership Application Status

2.4.3 UC003: Use Case < View Financial Status >

Table 2.4.3.1: User Story Description for View Financial Status

User story: View Financial Status
ID: US003
User Story Description:

As a Koperasi KADA member

I want to view my financial status

So that I can get to know my current financial status.

Flow of events:

1. The member logs in to the system by using the registered email.
2. The member navigates to the “Profile” section.
3. The member reviews the financial status.

Alternative flow:

-

Acceptance Criteria

Precondition:

1. The member logs in to the system.

Postcondition:

1. The member successfully views the financial information.

Other conditions: -

Exception flow:

1. If the system is down, the system will prompt a message to advise the employee to try later.

Figure 2.4.3.2: Sequence Diagram for View Financial Status

Figure 2.4.3.3: Activity Diagram for View Financial Status

2.4.4 UC004: Use Case < Apply for Loan >

Table 2.4.4.1: User Story Description for Apply for Loan

User story: Apply for Loan
ID: US004
User Story Description: As a Koperasi KADA member I want to apply for a loan from the cooperative So that I can get the
Flow of events: 1. The member logs in to the system by using the registered email. 2. The member chooses the “Permohonan Pembiayaan Anggota ” on the navigation bar. 3. The member fills in all the personal details in the form. 4. The member needs to upload the required documents such as "Butir-Butir Penjamin" and "Borang Pengesahan Majikan". 5. The member presses the submit button to submit the application form. 6. The system will prompt a message to confirm the submission.
Alternative flow: 1. If the personal information is incomplete, the system will prompt a message to remind the employee to fill in the incomplete place. 2. If the application is rejected, the employee must reapply and cannot log in to the system.
Acceptance Criteria Precondition: 1. The member logs in to the system. Postcondition: 1. If the application is approved, the member will receive a notification and the employee can log into the system to enjoy the benefits provided by the cooperative. 2. If the application is rejected, the employee will receive a notification. The employee must reapply and cannot log in to the system. Other conditions:

1. A rejected application must clearly notify the reason for the rejection so that the employee can easily reapply.

Exception flow:

1. If the system is down, the system will prompt a message to advise the employee to try later.
2. If the employee has invalid details, the system will prompt a message to remind the employee to re-enter.

2.4.6 UC006: Use Case < Manage Profile >

Table 2.4.6.1: User Story Description for Manage Profile

User story: Manage Profile
ID: US006
User Story Description As a Koperasi KADA member I want to manage my profile So that I can ensure my personal details and activities with the cooperative are accurate and up to date.
Flow of events: 1. The member logs into the system using their registered email 2. The member navigates to the profile section. 3. The profile will display the member's profile details include 3.1. personal information 3.2. loan application details and status 3.3. contribution history 4. The member can update any desired profile information and click the save button. 5. The system will validate the updated information. 6. If all input is valid: 6.1. The system will update the information in the database 6.2. The system will prompt a success message. 7. If the input is invalid, the system will prompt an error message to inform the user to update the information again.
Alternative flow <i>n</i>: 1. If the member enters invalid data, the system will request the member to reenter the data. 2. If the system is temporarily unavailable, it will display a maintenance message and ask the member to try again.
Acceptance Criteria Precondition: 1. The member logged in to the system. Postcondition: 1. Profile updates are successfully saved in the database. 2. Members can view the updated information in their profile immediately. Other Conditions: 1. The system must validate all inputs before saving.
Exception flow: 1. If the system is down, the system will prompt a message to advise the employee to try later.

Figure 2.4.6.2: Sequence Diagram for Manage Profile

2.4.7 UC007: Use Case < Terminate the Membership>

Table 2.4.7.1: User Story Description for Terminate the Membership

User story: Terminate the Membership
ID: US007
User Story Description As an Koperasi KADA member I want to terminate the membership So that I can discontinue my association with Koperasi KADA and avoid any further obligations or responsibilities.
Flow of events: 1. The member logs into the system. 2. The member navigates to the "Permohonan berhenti menjadi anggota" section. 3. The system displays the termination form 4. The member fills in the required details and submits the request. 5. The system validates the request and sends it to the admin for approval. 6. The admin reviews and approves/rejects the termination request. 7. The system update the status of termination.
Alternative flow <i>n</i>: -
Acceptance Criteria Precondition: 1. The member must have an active membership. Postcondition: 1. The termination request is submitted, and the member is notified of the approval or rejection status.

Figure 2.4.7.2: Sequence Diagram for Terminate the Membership

Figure 2.4.7.3: Activity Diagram for Terminate the Membership

2.4.8 UC008: Use Case < Approve Membership Application >

Table 2.4.8.1: User Story Description for Approve Membership Application

User story: Approve Membership Application
ID: US008
User Story Description As an Koperasi KADA admin I want to view and validate the membership application information So that I can approve the Koperasi KADA employees' membership application.
Flow of events: - The admin logs into the system. - The admin selects the three status of the membership application progress, either approved, in progress and fail. - The system retrieves relevant data from the database, including new, in progress and completed member applications. - The system generates an overall member application report summary and detailed breakdown of each member's information in a specified period. - The system displays the report, providing options to: view the report in detail, export the report (PDF, Excel) or print the report.
Alternative flow <i>n</i>: If the applicant didn't provide the accurate information, the admin will ask the applicant to update new information.
Acceptance Criteria Precondition: - The admin logged in to the system. Postcondition: - Accurate and timely reports are generated. - Visual charts and summaries are easy to understand. - Exportable to formats like PDF or Excel.

Figure 2.4.8.2: Sequence Diagram for Approve Membership Application

Figure 2.4.8.3: Activity Diagram for Approve Membership Application

2.4.9 UC009: Use Case < Approve Loan Application >

Table 2.4.9.1: User Story Description for Approve Loan Application

User story: Approve Loan Application
ID: US009
User Story Description As an Koperasi KADA admin I want to view and validate the members loan application information So that I can approve the Koperasi KADA members loan application.
Flow of events: 1. The admin logs into the system. 2. The admin selects the three status of the loan application progress, either approved, in progress and fail. 3. The system retrieves relevant data from the database, including new, in progress and completed loan applications. 4. The system generates an overall loan application report summary and detailed breakdown of each loan application information in a specified period. 5. The system displays the report, providing options to: view the report in detail, export the report (PDF, Excel) or print the report.
Alternative flow <i>n</i>: 1. If the applicant didn't provide the accurate information, the admin will ask the applicant to update new information.
Acceptance Criteria Precondition: 1. The admin logged in to the system. Postcondition: 1. Accurate and timely reports are generated. 2. Visual charts and summaries are easy to understand. 3. Exportable to formats like PDF or Excel.

Figure 2.4.9.2: Sequence Diagram for Approve Loan Application

Figure 2.4.9.3: Activity Diagram for Approve Loan Application

2.4.10 UC0010: Use Case < Approve terminate membership application>

Table 2.4.10.1: User Story Description for Approve Terminate Membership Application

User story: Approve terminate membership application
ID: US010
User Story Description As an Koperasi KADA admin I want to review and validate the members' termination requests, So that I can approve or reject membership termination applications effectively.
Flow of events: 1. The admin logs into the system. 2. The admin selects the three status of the membership termination application progress, either approved, in progress and fail. 3. The system retrieves relevant data from the database, including new, in progress and completed membership termination applications. 4. The system generates an overall membership termination application report summary and detailed breakdown of each loan application information in a specified period. 5. The system displays the report, providing options to: view the report in detail, export the report (PDF, Excel) or print the report.
Alternative flow <i>n</i>: 1. If the applicant didn't provide the accurate information, the admin will ask the applicant to update new information.
Acceptance Criteria Precondition: 1. The admin logged in to the system. Postcondition: 1. Accurate and timely reports are generated. 2. Visual charts and summaries are easy to understand. 3. Exportable to formats like PDF or Excel.

Figure 2.4.10.2: Sequence Diagram for Approve Terminate Membership Application

Figure 2.4.10.3: Activity Diagram for Approve Terminate Membership Application

2.4.11 UC0011: Use Case < Generate Report >

Table 2.4.11.1: User Story Description for Generate Report

User story: Generate Report
ID: US009
User Story Description As an Koperasi KADA admin I want to generate reports So that I can monitor the cooperative's membership and loan application growth.
Flow of events: 1. The admin logs into the system. 2. The admin selects the report type, either membership, loan or cooperation financial report. 3. The system retrieves relevant data from the database. 4. The system generates a financial summary and detailed breakdown of each category for the specified period. 5. The system displays the report, providing options to: view the report in detail, export the report (PDF, Excel) or print the report.
Alternative flow <i>n</i>: 1. If an invalid report type is detected, the system prompts the admin to select another correct type.
Acceptance Criteria Precondition: 1. The admin logged in to the system. Postcondition: 1. Accurate and timely reports are generated. 2. Visual charts and summaries are easy to understand. 3. Exportable to formats like PDF or Excel.

Figure 2.4.11.2: Sequence Diagram for Generate Report

Figure 2.4.11.3: Activity Diagram for Generate Report

2.5 Performance and Other Requirements

In this section, we will identify the system's expected operational performance and how the system is supposed to behave.

Software system attributes define the overall qualities or characteristics of the system. These attributes are the foundation of the Koperasi KADA Online System, as listed below:

- Usability: The system should be simple for the user to navigate and interact with the UI and other functionalities.
- Reliability: The system should be able to perform its functions correctly and consistently, while also being able to handle any errors or system failures.
- Maintainability: The system can be modified, repaired, and enhanced to improve its scalability.

- **Compatibility:** The system is able to work with most OS systems such as Windows, macOS, Linux and mobile devices like Android and iOS. The system should be able to adapt to different interfaces, such as desktop interface and mobile interface,

Performance requirements define how well the system must perform under certain conditions to meet user expectations. The requirements are listed below:

- **Response Time:** The system should be able to minimize response time to under 1 second.
- **Real-Time Synchronization:** The system should be able to actively update user data in real-time without any interruptions.
- **Capacity:** The system should be able to support up to 100 people at a time. This is to maintain the systems' operationality during peak usage.
- **Availability:** The system should be available for use 99.9% of the operational time. Any system failure should be immediately addressed to reduce the delay of system operational time.

Other requirements refer to any non-functional requirements that define the system's qualities, separate from the system's functionality. These requirements include the following:

- **Security:** The system should be able to provide secure data access for the admin. It should also prevent potential data breaches from unauthorized access.
- **Safety:** The system should be able to operate safely without causing harm or crashes to the user's environment.
- **Legal and Regulatory:** The system's policy should comply with standard laws, regulations and standards.
- **Localisation:** The system should follow local standards (Malaysia) such as time zone (UTC+8) and money currency (RM).

2.6 Design Constraints

Security Compliance: The system must comply with data protection regulations such as GDPR (General Data Protection Regulation) and PDPA. To protect member information, Two-Factor Authentication (2FA) must be used for secure user access.

Data Integrity: All sensitive data must be accurately processed and stored, with redundancy in place to reduce the risk of data loss. Periodic data integrity checks should be performed to prevent unauthorised changes or corruption.

Scalability: The system's infrastructure should be scalable to accommodate an expanding user base. This includes a cloud-based solution that can handle increasing workloads while maintaining high availability during peak usage periods.

Cross-Browser Compatibility: The system must work seamlessly with popular web browsers like Google Chrome, Mozilla Firefox, and Microsoft Edge, as well as on a variety of devices like desktops, tablets, and smartphones.

Role-Based Access Control: The system must enforce Role-Based Access Control (RBAC), which ensures that permissions and access levels are tailored to specific user roles (for example, administrators, clients, members, and board directors). This includes limiting sensitive functionalities to only authorised personnel.

3. Architectural Rationale

The Koperasi KADA Online System architecture is based on the Laravel Framework, a modern PHP-based web development framework that follows the Model-View-Controller (MVC) design pattern.

3.1 Architecture Style and Rationale

The Koperasi KADA Online System adopts a layered architecture style, structured into three main layers: the Presentation Layer, Application Layer, and Data Layer. The Presentation Layer serves as the user interface, allowing employees, members, and admins to interact with the system for tasks such as applying for membership, submitting loan requests, and terminating memberships. The Application Layer contains the business logic and controllers that process user requests, validate inputs, and execute system workflows. Lastly, the Data Layer is responsible for storing and retrieving information, ensuring data consistency and security.

The choice of layered architecture is driven by its ability to separate concerns, making the system modular, maintainable, and scalable. Each layer operates independently, which simplifies debugging, updates, and future enhancements. Additionally, this structure enhances security by preventing direct database access from the user interface, ensuring that all operations pass through the business logic layer. The system's design also facilitates reuse of components, as core functionalities such as membership management and loan approvals can be leveraged across different modules without redundancy.

To complement this architecture, the traditional Waterfall development approach is used, as it aligns well with the structured nature of cooperative processes. The Waterfall model ensures that each phase—requirement gathering, design, implementation, testing, and deployment—is completed sequentially before progressing to the next. This method is suitable because the system requirements are well-defined and stable, minimizing the need for iterative changes. Additionally, the structured approach ensures comprehensive documentation, which is essential for maintenance and future upgrades. While the Waterfall model may lack

flexibility, it is ideal for a system like Koperasi KADA Online, where the workflows for membership, loans, and approvals follow standardized, predictable procedures.

In conclusion, the layered architecture combined with the traditional Waterfall approach ensures a structured, secure, and maintainable system. This design supports efficient processing of membership applications, loan requests, and terminations while maintaining data integrity and system scalability.

4.0 Architectural Views

This section of the SD serves as part of SDD that should describe the architectural views of the system based on the framework developed by Philippe Kruchten. The views consist of a scenario view, logical view, process view, development view and physical (deployment) view as shown in Figure 4.1. Each view have its own usage and models or diagram to represent it as shown in Table 4.1.

Figure 4.1 – Architectural Views

Table 4.1: Description of Koperasi KADA Online System Architectural Views

Architectural Views	Description	Diagrams used
Use Case View	The elements in the four views are shown to work together seamlessly by the use of a small set of important scenarios in general use cases	Use Case Diagram
Logical View	shows the key abstractions in the system as objects or object classes	Class Diagram
Process	The process view deals with the dynamic aspects of the system, explains the system processes and how they communicate, and focuses on the run-time behaviour of the system.	Sequence Diagram
Development (or Implementation) View	shows how the software is decomposed for development	Component Diagram Package Diagram

Physical (or Deployment) View	shows the system hardware and how software components are distributed across the processors in the system	Deployment Diagram
-------------------------------	---	--------------------

4.1 Use Case View

The **Koperasi KADA Online System** is designed to streamline processes such as member registration, loan applications, and reporting. The use case diagram below (Figure 4.1.1) illustrates the interactions between various actors and the system's primary functions.

Figure 4.1.1: Use Case Diagram for <Koperasi KADA Online System>

Actors:

1. **Employee:** A person who wants to register as a member.
2. **Member:** An existing user who can apply for loans and view their financial status.
3. **Admin:** Responsible for managing validation and report processing.

Use Case Descriptions

1. Apply Membership

Actor: Employee

Goal: To become a registered member of the Koperasi KADA.

Description: A Koperasi KADA employee provides their personal details for registration, and the system stores the information for validation.

2. View Membership Registration Status

Actor: Employee

Goal: To check their current status of the membership registration progress.

Description: A Koperasi KADA employee can monitor the progress of their membership registration, allowing them to view the current status, updates, or any actions required to complete the registration process.

3. View Financial Status

Actor: Member

Goal: To view financial and loan information.

Description: Members can access their financial data, including loan status and repayment details.

4. Apply for Loan

Actor: Member

Goal: To request a loan.

Description: Members submit loan applications along with required details for review and approval.

5. View Loan Application Status

Actor: Member

Goal: To check their current status of the loan application progress.

Description: Members can monitor the progress of their loan application, allowing them to view the current status, updates, or any actions required to complete the application process.

6. Manage Profile

Actors: Member

Goal: To update their own personal information.

Description: Members can log into the system to manage their personal profile, including updating their current information such as address, phone number and other relevant details.

7. Terminate Membership

Actors: Member

Goal: To cancel their membership with Koperasi KADA.

Description: A Koperasi KADA member submits a **membership termination request** through the system. The request is sent for **admin approval** before final processing.

8. Approve Membership Registration

Actors: Admin

Goal: To view and approve Koperasi KADA employees' membership registration.

Description: Admin reviews and verifies the details of membership registration submitted by Koperasi KADA employees.

9. Approve Loan Application

Actors: Admin

Goal: To view and approve Koperasi KADA members' loan application.

Description: Admin reviews and verifies the details of loan applications submitted by Koperasi KADA members.

10. Generate Reports

Actors: Admin

Goal: To generate system reports, including membership registration, loan application and cooperation financial funds.

Description: Admins process system data to create reports for further report viewing.

11. Approve Terminate Membership Application

Actor: Admin (Koperasi KADA board director or system admin)

Goal: To approve or reject membership termination requests.

Description: The admin reviews **termination requests** submitted by members, verifies eligibility, and either **approves or rejects** the termination. Upon approval, the **membership status is updated** in the system.

4.2 Implementation View

The Koperasi KADA Online System is an independent platform specifically created to streamline manual processes at Koperasi Kakitangan KADA Kelantan Berhad. This system consolidates multiple functions, such as member registration, application processing, savings management, and loan application processing, into one digital solution. It connects to a secure database for storing and managing user and financial information, while also integrating with email and SMS services to keep users informed about updates. Utilizing role-based access control, differentiates functionalities for employees, members and administrative staff.

Figure 4.2.1 illustrates the architecture of the Koperasi KADA Online System. This system integrates various components and interactions to make up the system. It enables seamless interaction between users and administrative staff through a unified platform where users can access all the services and functionality the system provides and the admin can control the activities in the systems (control access). All the information would be kept in the databases through the data access subsystem. Key services include member registration, loan application processing, money saving, and financial report generation.

Figure 4.2.1: Architecture Diagram of <Koperasi Kada Online System>

Figure 4.2.2: Package Diagram for <Koperasi KADA Online System>

Figure 4.2.3: Package Diagram for <Membership management> Subsystem

Figure 4.2.4: Package Diagram for <Loan Management> Subsystem

Figure 4.2.5: Package Diagram for <Financial Management> Subsystem

Figure 4.2.6: Package Diagram for <Reporting> Subsystem

4.3 Logical View

This view focuses on the system's structure from the perspective of the developer or software designer. It represents the key abstractions in the system, often modelled as objects or object classes in object-oriented design. For each subsystem/package, there will be a class diagram and sequence diagram(s) based on the cases I have come up with. At the end, we have included a full class diagram to represent all classes in the respective subsystem/package.

Figure 4.3.1: Class diagram for <Apply for Membership> Subsystem

Figure 4.3.3: Class Diagram for <View Financial Status> Subsystem

Figure 4.3.4: Class Diagram for <Process Report> Subsystem

Figure 4.3.5: Class Diagram for <Koperasi KADA Online System> Subsystem

4.4 Process View

This section illustrates the dynamic aspects of the system, specifically how its components interact at runtime. It demonstrates how the system is composed of processes that communicate with each other. Below are the sequence diagrams for each major use case in our subsystem package. There are unique codes for each scenario of the sequence diagram.

Figure 4.4.10: SD009 Sequence Diagram for <Approve Terminate Membership Application >

Figure 4.4.11: SD0011 Sequence Diagram for < Generate Report>

4.5 Physical/ Deployment View

In Figure 4.5, the deployment diagram illustrates the physical architecture of the Koperasi KADA Online System, showing how its software components are distributed across various hardware nodes and interconnected. At the core, the user would interact with the system via a browser or mobile app, communicating securely with the web server over HTTPS. The Web Server, hosted on a physical or cloud-based server, manages user interfaces and presents requests to the Application Server, which processes business logic and handles interactions with other components. The Database Server stores persistent data such as member details, membership applications, and loan records. A Load Balancer ensures scalability and fault tolerance by distributing user requests across multiple Web or Application Server instances. This design ensures high performance, reliability, and efficient resource utilization.

Figure 4.5: Deployment diagram for Internet-based System

5. Data Design

The major data or systems entities are stored in a relational database named db_kada, processed and organized into 18 entities as listed in Table 5.1.

Figure 5.1 Logical ERD for Koperasi KADA Online System

Table 5.1: Description of Entities in the Database

No.	Entity Name	Description
1.	employee	Represents person working in the Koperasi KADA
2.	member	Represents registered users who have successfully created accounts in Koperasi KADA Online System
3.	admin	Represents the system admin who is responsible for managing the Koperasi KADA Online System

4.	memberRegistration	Describe all activities when a user registers as a member of Koperasi KADA
5.	familyMemberInfo	Represents all the information about members' family members recorded
6.	feesAndContribution	Represents fees paid by members and any contributions made towards Koperasi KADA
7.	loan	Represents loan applications submitted by members
8.	guarantorDetails	Represents information about members' loan guarantors
9.	financialStatus	Represents member's financial health
10.	transaction	Represents all financial transaction details made by members
11.	homeAddress	Represent the member's home address
12.	officeAddress	Represent the member's office address
13.	bank	Represent the member's bank that is used to deposit the money
14.	memberapplicationDetail	Represent the details of the registration status
15.	loanApproval	Represent the approval details of the loan application status
16.	guarantor	Represent the detail of the guarantor when apply loan
17.	report	Represent the statement generated for approved member and loan application
18.	reportDetails	Represent the details of the member and loan report status

5.1 Data Dictionary

5.1.1 Entity: Employee

Attribute Name	Type	Description
employeeID (PK)	VARCHAR (8)	Unique ID for the user
password	VARCHAR (30)	User's account password
role	VARCHAR (10)	User's role
email	VARCHAR(255)	User's email

5.1.2 Entity: Member

Attribute Name	Type	Description
employeeID (PK)	VARCHAR (8)	Unique ID for member
noPF	INT (4)	Provident fund of the member
memberName (FK)	VARCHAR (80)	Name of the member
ic	CHAR (12)	Identification number of the member
email (FK)	VARCHAR (30)	Member's email address
phoneNumber	VARCHAR (15)	The contact number of the member
sex	CHAR (1)	Gender of the member (M/F)
religion	VARCHAR (30)	The religion of the member
maritalStatus	VARCHAR (15)	Marital status
nation	VARCHAR (30)	Nationality of the member
position	VARCHAR (30)	Working position of the member
monthlySalary	DECIMAL (10,2)	Member's monthly salary
statementID	VARCHAR (20)	Unique ID for financial statement

5.1.3 Entity: Admin

Attribute Name	Type	Description
employeeID (PK)	VARCHAR (8)	Unique ID for admin
staffName	VARCHAR (80)	Name of the admin

5.1.4 Entity: memberRegistration

Attribute Name	Type	Description
memberRegistrationID (PK)	VARCHAR (20)	Unique ID for member registration

5.1.5 Entity: familyMemberInfo

Attribute Name	Type	Description
icFamilyMember	CHAR (12)	Identification number of the family member
relationship	VARCHAR (30)	Relationship between family member and member
familyMemberName	VARCHAR (80)	Name of the family member

5.1.6 Entity: feesAndContribution

Attribute Name	Type	Description
entryFee	INT (3)	Fee for register as a member
modalShare	DECIMAL (10,2)	The member's share capital or investment in the organization.
feeCapital	DECIMAL (10,2)	Total fee capital of the member

deposit	DECIMAL (10,2)	Total amount deposited by member
contribution	DECIMAL (10,2)	The member's recurring or voluntary financial contribution
fixedDeposit	DECIMAL (10,2)	Amount placed by the member as a fixed deposit with the organization.
others	VARCHAR (50)	Additional fees or contributions

5.1.7 Entity: Loan

Attribute Name	Type	Description
loanApplicationID (PK)	VARCHAR (20)	Unique ID for loan application
amountRequested	DECIMAL (12,2)	Amount requested for the loan
financingPeriod	INT (2)	Loan repayment period in months
monthlyInstallments	DECIMAL (10,2)	Monthly repayment amount
bankNo	VARCHAR (15)	The bank number account

bankName	VARCHAR (50)	Bank name for loan transfer
financialType	VARCHAR (30)	Type of Financing

5.1.8 Entity: guarantor

Attribute Name	Type	Description
icGuarantor (PK)	CHAR (12)	Identification number of the member
guarantorName	VARCHAR (80)	Name of the guarantor
memberIdGuartor	VARCHAR (8)	Unique ID for member's guarantor
guarantorPFNo	INT (4)	Guarantor's provident fund number
telGuarantor	VARCHAR (15)	Contact number of the member's guarantor

5.1.9 Entity: financialStatus

Attribute Name	Type	Description
accountID (PK)	VARCHAR (8)	Unique ID for member's financial account
statementID	VARCHAR (20)	Unique ID for financial statement
memberSaving	DECIMAL (10,2)	Total savings for the member
alBai	DECIMAL (10, 2)	Total loan amount of Al-Bai
alInnah	DECIMAL (10, 2)	Total loan amount of Al-Innah
bPulihKenderaan	DECIMAL (10, 2)	Total loan amount of recover vehicle
roadTaxInsurance	DECIMAL (10, 2)	Total loan amount of road tax insurance
alQadrulHassan	DECIMAL (10, 2)	Total loan amount of Al-Qadrul Hassan
specialScheme	VARCHAR (100)	Name of any special scheme availed
dateUpdated	DATE	Last update date of the financial status

5.1.10 Entity: Transaction

Attribute Name	Type	Description
transID (PK)	VARCHAR (20)	Unique ID for transaction
transType	VARCHAR (50)	Type of transaction
transAmt	DECIMAL (12,2)	Transaction amount
transDate	DATE	Date of the transaction

5.1.11 Entity: homeAddress

Attribute Name	Type	Description
homeAddress	VARCHAR (225)	Address for member's home
homePostcode	VARCHAR (10)	Postcode for member's home
homeState	VARCHAR (20)	State for member's home

5.1.12 Entity: officeAddress

Attribute Name	Type	Description
officeAddress	VARCHAR (225)	Address for member's office
officePostcode	VARCHAR (10)	Postcode for member's office
officeState	VARCHAR (20)	State for member's office

5.1.13 Entity: memberApproval

Attribute Name	Type	Description
regisApproveDate	DATE	Date when member registration is approved
regisStatus	VARCHAR (8)	Status of the member registration

5.1.14 Entity: memberApplicationDetails

Attribute Name	Type	Description
regisDate	DATE	Date that member apply for loan
regisStatus	VARCHAR (8)	Status of the member registration

5.1.15 Entity: loanApproval

Attribute Name	Type	Description
loanApproveDate	DATE	Date that admin have approve loan application
loanStatus	VARCHAR (20)	Status of the loan application

5.1.16 Entity: guarantor

Attribute Name	Type	Description
icGuarantor (PK)	VARCHAR (20)	Guarantor's IC
memberIDGuarantor	INT (11)	Guarantor's unique employee ID
guarantorName	VARCHAR (255)	Name for guarantor
guarantorPFNo	VARCHAR (20)	Guarantor's provident fund number
guarantorMemberNo	VARCHAR (20)	Guarantor's employee number

5.1.17 Entity: report

Attribute Name	Type	Description
reportType	VARCHAR (10)	Report type, either member or loan application
reportFormat	VARCHAR (3)	Report export/download format

5.1.18 Entity: reportDetails

Attribute Name	Type	Description
generateDate	DATE	Date report is generated
reportStatus	VARCHAR (11)	Status of the report, either active or non-active

5.1.19 Entity: berhenti

Attribute Name	Type	Description
employeeID	INT(4)	Employee's id
reason	TEXT	Reason provided by the employee for terminating membership.
applyDate	DATE	The date when the termination request was submitted.
approvalStatus	ENUM ('Pending', 'Tolak', 'Lulus', '')	The current status of the termination request: Pending, Rejected (Tolak), Approved (Lulus), or Empty (default).
approveDate	DATE	The date when the termination request was approved.

rejectReason	TEXT	Explanation provided by the admin if the request is rejected.
--------------	------	---

5.1.20 Entity: deduction

Attribute Name	Type	Description
employeeID	INT(4)	Employee's unique ID.
DeducType_ID	INT(10)	Foreign key referencing the deduction_type entity.
Deduct_Amt	DECIMAL (10.2)	Amount deducted from the employee's salary.
Deduct_date	DATE	Date when the deduction was applied.

5.1.21 Entity: deduction_type

Attribute Name	Type	Description
DeducType_ID	INT(10)	Unique identifier for each deduction type.
typeName	VARCHAR (50)	Name of the deduction type (e.g. Modal Share, Fee Capital).
d_desc	TEXT	Description of the deduction type.

5.1.21 Entity: interestrate

Attribute Name	Type	Description
rate	DECIMAL(5,2)	Current interest rate for loans.
updated_at	TIMESTAMP	Timestamp indicating when the interest rate was last updated.
updated_by	VARCHAR (50)	The admin or system user who updated the interest rate.

6. User Interface Design

The interface includes a membership application, loan application, profile page, view financial status, reporting and status page.
